

Example - Bash Script

- *Bash* syntax is backwards, due to declaration-before-use
- Most important stuff in a *bash* script is at the bottom, instead of at the top

Example (con't)

```
#!/bin/bash
# _containment_

clear
set -e
trap 'catch' ERR

catch () {
    echo '*** FATAL ERROR ***'
    exit 1
}

# _details_
script1 () {
    echo hello
    echo world
    echo from script 1

}
script2 () {
    echo hello
    echo world
    echo from script 2

}
script3 () {
    echo hello
    echo world
    echo from script 3

}

# _fb pipeline_
script1
script2
script3
```
