

How?

- Use tiny, tiny steps
- 1. convert .md syntax to intermediate form
 - e.g. “# ... ## ...” to “{ ... { ... } ... }”
- 2. Use PEG (Ohm-JS) to *grok* “{ ... { ... } ... }” and *emit* something else
- 3. Flip code into declaration-before-use format.

Example - Bash Script

- *Bash* syntax is backwards, due to declaration-before-use
- Most important stuff in a *bash* script is at the bottom, instead of at the top
