

FDD How?

- fail fast
- build in backtracking => automation
- look to compiler technologies, transpilation
- Notations, not Languages nor DSLs

Notations, Not Languages

- *Notation* is a lightweight DSL
- Programming Language: heavyweight, high cost to build
- DSL: heavyweight, high cost to build
- Specialize Notation to Problem Space *only*
 - avoid generalizing
- YAGNI - You Aren't Going to Need It
