

Glue Tool Syntax - RHS Output

- `[[...]]` where `...` is wrapped in JS ``...`` strings
- `${v}` inserts value of `v` into final string
- other text copied verbatim
- *Glue* transpiler generates code to eval match captures (LHS parameters)

Glue Tool Syntax - RHS Preamble

- `{{ ... }}` where ... is any JS code
- inserts JS code into generated output at top of generated function
 - (see Notation Example for typical usage)
