

# Glue Tool

Ohm-JS Helper  
Paul Tarvydas, April 2021

# Glue Tool

- transpiles semantics specification to JS
- used in conjunction with Ohm-JS
- *cat transpiled grammar + transpiled JS semantics —> transpiler*
- use Ohm-JS to create a PEG parser for a mini-language for semantics transpiler (I call this the *glue* tool)
- “do 1 thing well”
  - simple spec —> JS code
- machine readable syntax allows for future extension via pipelining
  - ugly “human” syntax is ASCII to aid in alpha-level debugging
