

# Minimum DI Syntax

- *thing*
- collection of *thing*
- function(*thing*) returns *thing*

# Control Flow

- Q: how to specify minimal control-flow constructs?
- recursive functions
- `if-then-else-endif`
  - subsumed by `switch`
- what else?
- philosophy — include only the bare minimum, not the kitchen sink
  - use PEG (etc.) to provide syntax skins over bare minimum syntax and to produce different views
