

# Glue — Foreign Functions

- Foreign functions constitute a layer of detail that is elided from top layer
- Glue specifies no syntax for underlying functionality
- Glue punts to underlying language (toolbox language)
- All external (foreign) functions placed in file `foreign.js`
- SH script (bash, zsh, etc.) `cats foreign.js` into final app
- (idea inspired by (stolen from) S/SL)

# Appendix

- Ohm-JS
- Ohm-editor
- Ohm in small steps
