

Grok

- Based on PEG technology
- uses Ohm-JS (PEG)
 - <https://ohmlang.github.io>
- use Ohm-Editor as IDE for grammar development
 - <https://ohmlang.github.io/editor/>

Emit

- Use JS backtick syntax (template strings)
- simplified “semantics” code for Ohm-JS (backtick strings only)
- reminiscent of `/bin/sh` strings
- `[[abc]]` emit “abc” literally
- `[[${abc}]]` emit value of variable `abc`
- `[[${abc()}]]` call function `abc()` which returns a string
