How - Step 2

```
# _containment_

# _fb pipeline_
        allContains1
        printAllDeepContains
        printAllDirectContains

# _details_
allContains1 () {
        load fb
        load onSameDiagram
        load contain1

}
printAllDeepContains () {
        load fb
        load onSameDiagram
        load contains2

}
printAllDirectContains () {
        load fb
        load onSameDiagram
        load contains3

}
```

- Convert pseudo-code to bash-like pseudo-code

- Github: https://github.com/guitarvydas/md2bash

- [N.B. this is invalid *bash* code, since it violates declaration-before-use]

Step 3 - Flip Code Sections

- [flip](https://guitarvydas.github.io/2021/08/03/Flipping-Code.html)

- Change one line of *emit* from:

- `Main [lb id commands details rb] = [[# ${id}\n${`**`commands`**`}\n${`**`details`**`}]]`

- to

- `Main [lb id commands details rb] = [[# ${id}\n${`**`details`**`}\n${`**`commands`**`}]]`
