Overview

```
{ account: name
  { statement: date
    { year: integer
      [ mm-dd category amount comment ]
      [ mm-dd category amount comment ]
      ...
    }
  }
}
```

Overview (con't)

- looks a lot like ASON, at least at lower layers

- upper layers depend on my specific problem

- PEG + backtracking to handle upper layers

- PEG pipeline to handle ASON
